

Global Leading Renewable Energy Systems Projects

DCTI German CleanTech Institute
SUSTAINABILITY BY INNOVATION

Global Leading RES Projects

The number of RES projects keeps on growing all over the world. Thousands of companies along the entire value chain – operating on national or international basis – are active to promote the clean energy sources. Installing RES projects represent a huge challenge, especially in emerging markets without comprehensive support schemes. Due to the tens of thousands of projects implemented every year, there is only little awareness for projects of particular importance.

Developed by the German CleanTech Institute (DCTI) and supported by the leading market intelligence company in the sustainable business sector EuPD Research, the certification identifies, highlights and communicates outstanding performances of RES projects worldwide and starts by taking a closer look at PV and EES projects. The certification rewards projects in five categories. The seals relate to one region/country and are awarded on a yearly basis.

Example seal

First Mover

First significant PV / EES project

Tech Driver

PV / EES project with the most innovative technological attributes

Innovative Application

PV / EES project with the most innovative application

Unique Location

PV / EES project in the most singular location

Largest Project

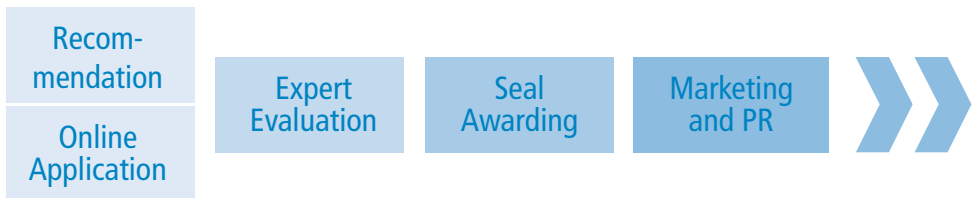

Largest PV (ground-mounted/roof-top) / EES project

Application and Selection Process

Projects are eligible to the award upon recommendation of our expert panel or through the completion of the online form. The online application process takes about 10 minutes and is entirely free of charge. Besides project information, applicants are invited to upload one document, underlining their exceptional achievements.

Applications can be uploaded continuously. A committee of international industry experts will evaluate and decide on the success of the applications. Awarded projects will be announced during the year. The handover of the respective certificates takes place at different conferences and trade shows during the year.

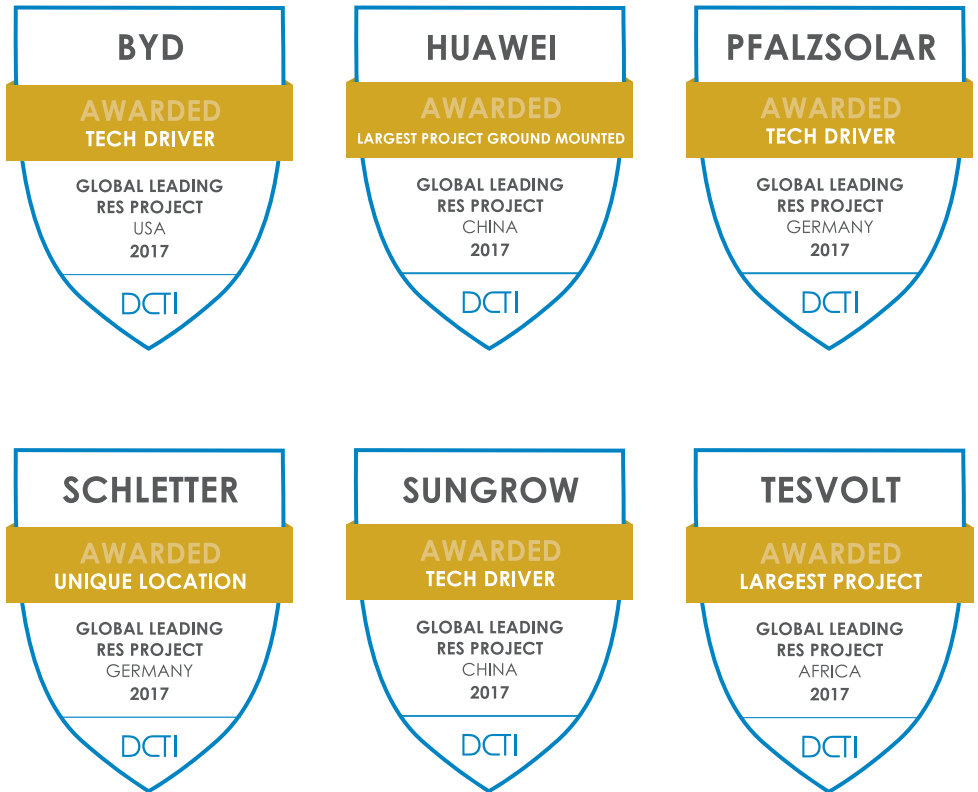

Application form: www.dcti.de/en/awards/global-leading-projects

Benefits

- Acknowledgement as industry pioneer
- Award of exceptional achievements
- Strengthening of company and brand image
- Boost of project visibility among future investors and stakeholders
- Enhance investors' confidence
- Maximised exposure and credibility among 120,000 industry stakeholders
- Access to new target groups
- Valuable and recognized B2B marketing tool
- Extensive communication to over 4,500 renewable energy journalists
